$80M	450+	$10B+	$5M+	45-50%	16+
TECH PORTFOLIO	FTE ORGANIZATION	ENTERPRISE SCALE	ANNUAL SAVINGS	AI VELOCITY GAIN	YEARS LEADING

EXECUTIVE PROFILE

Technology and transformation executive with 16+ years of leadership across research-intensive institutions and large, highly regulated healthcare enterprises. Leads an $80M technology portfolio and 450+ FTE organization within Hartford HealthCare's $10B+ enterprise. Former Chief Information & Data Science Officer with designated CIO responsibility for an NCI-designated comprehensive cancer center, a leading eye institute, and a nationally recognized clinical and translational science research institute. Partners with CEOs, executive leadership, and board technology committees on enterprise modernization, investment priorities, and responsible AI. Prepared to lead a global, CEO-reporting digital agenda through significant enterprise transformation.

TRANSFORMATION LEADERSHIP

- **Delivery against committed dates.** Enterprise EHR activation across 2 hospitals, 10 clinics, 3,000 users and 400 providers to an on-schedule go-live; an earlier activation spanning 9 hospitals in 11 months; a zero-downtime transition of 36,000 employees to remote work. Programs committed publicly and landed.
- **AI strategy taken from board approval into production.** H2D2, the largest technology investment in the organization's history, approved by the CEO and board and built; a governance model carrying every initiative from intake to controlled production; 2,600 employees and 2,000+ clinicians using what shipped.
- **Enterprise platforms and ERP.** Co-led a Workday upgrade and configuration, personally owning data conversion, the integration layer, and reporting; owns PeopleSoft back-end infrastructure on Exadata today; $5M+ in annual savings from application and vendor rationalization.
- **Organizational transformation.** Redesigned a 450+ FTE division into a nine-director, two-layer operating model with new leadership investment in AI/Data Science, Application Engineering, and Research Informatics; ran technology across independently governed institutes and EU/UAE partners without collapsing local autonomy.

CORE COMPETENCIES

- Enterprise Digital & AI Transformation
- ERP & Enterprise Platform Delivery
- CEO, Board & Executive Advisory
- Program Delivery & Schedule Accountability
- Responsible AI, Validation & Governance
- Organizational Design & Operating Models
- Data Platforms & Multi-Cloud Architecture
- Regulatory Compliance & Cyber Resilience
- M&A Integration & Portfolio Management

EXECUTIVE EXPERIENCE

Senior Vice President, Digital Technology & Data Sciences 2024 – Present

Hartford HealthCare · Hartford, CT

$10B+ integrated enterprise | 550+ sites | 48,000+ employees | $80M CAPEX/OPEX portfolio | 450+ FTE organization | Enterprise executive for digital strategy, AI, data science, research informatics, innovation, and IT modernization; reports to the COO/CIO and partners with the CEO and board technology committee

- Architected and delivered H2D2, a cloud-native enterprise data and AI platform and the largest technology investment in the organization's history, approved by the CEO, executive leadership, and board technology committee. Unifies data across 550+ sites; projected to cut data-request turnaround 40%, accelerate AI development velocity 45–50%, and increase research funding 10%.
- Redesigned the division into a nine-director, two-layer operating model (Foundation & Platform; Value & Delivery) with new director-level investment in AI/Data Science, Application Engineering, and Research Informatics.
- Established the enterprise AI governance framework covering every initiative from intake through production, with risk tiering, approval workflows, model validation, bias and performance monitoring, rollback protocols, and shadow-AI detection aligned to NIST AI RMF, sustaining compliance without slowing delivery.
- Scaled production AI to the front line: ambient documentation AI for 2,000+ clinicians (65% report improved efficiency; 45% report reduced burnout), augmented in-basket response, and PatientGPT patient-facing AI. Deployed Gemini Enterprise to 2,600 employees with governed self-service agent development and AI literacy programs.

- Led a GCP-first cloud modernization, migrating 75%+ of applications and delivering 25% infrastructure performance gains; co-led an enterprise EHR (Epic) activation across 2 hospitals, 10 clinics, 3,000 users, and 400 providers to an on-schedule go-live.
- Own the enterprise ERP back-end estate, including PeopleSoft infrastructure on Oracle Exadata, and rationalized the application and vendor portfolio for $5M+ in annual savings under disciplined ROI review of capital requests.
- Directed M&A technology integration and growth-enablement architecture. Outcomes attributable to digital and AI investment: 20% increase in patient access, 10% improvement in clinical outcomes, 18% reduction in non-urgent emergency utilization, 12% reduction in after-hours operating costs.
- Executive partner to the CISO on cybersecurity governance and board-level cyber-risk reporting; implemented business continuity and disaster recovery standards with tested failover across 25+ critical systems.

Chief Information & Data Science Officer 2021 – 2024

University of Miami Health System · Miami, FL

$5B+ academic health system | 30,000 employees | Enterprise role plus designated CIO for Sylvester Comprehensive Cancer Center (NCI-designated), Bascom Palmer Eye Institute, and the Miami Clinical and Translational Science Institute, independently governed research organizations with distinct funding, governance, and compliance requirements

- Architected and executed an enterprise-wide digital and AI transformation, achieving 30% improvement in operational efficiency, 40% reduction in technical debt, and national recognition for responsible, data-driven clinical technology.
- Built the research data foundation: enterprise data governance, IRB-aligned research data-access infrastructure, and federated data sharing; implemented Epic Cosmos and the Genomics module, integrating genomic datasets with clinical records for precision medicine and population-scale research.
- Directed three AI-powered clinical detection models into production under full institutional validation, defined performance thresholds, and continuous monitoring, establishing the accountability framework applied to every subsequent AI deployment.
- Co-led a Workday upgrade and configuration for the health system, owning data conversion, the integration layer, and enterprise reporting through cutover and stabilization.
- Designed and governed a multi-cloud strategy across AWS, Azure, and GCP, reducing infrastructure costs 20% and increasing scalability 50% while maintaining 100% adherence to HIPAA, GDPR, FedRAMP, and FISMA.

Vice President, Data & Digital Sciences 2017 – 2021

Hackensack Meridian Health · Edison, NJ

17-hospital integrated system | $7B+ revenue | 36,000+ employees

- Co-led governance and technology execution for an Epic implementation spanning 9 hospitals in 11 months, partnering with the CMIO and CQO on workflow design, data-integrity standards, and change management.
- Deployed enterprise telehealth infrastructure that increased virtual-care volume 300%, and a COVID-19 AI prediction platform that reduced patient-load forecasting error 30% and informed regional public-health policy.
- Led a zero-downtime remote-workforce transition for 36,000 employees; drove an enterprise data-literacy program reaching 30,000+ employees and directed an international data science consortium across EU and UAE institutions.

Director, Advanced Analytics & Data Science | University of Chicago Medicine · Chicago, IL 2013 – 2017

- Founded the organization's first enterprise analytics capability (data warehouse, predictive modeling, governance); real-time models improved mortality and readmission outcomes, and agent-based simulation increased ED throughput 25% and surgical capacity 10%.

Manager, Clinical Analytics & Informatics | Loyola University Health System · Maywood, IL 2010 – 2013

- Built the analytics organization from 2 to 75 FTEs and designed the institution's first clinician-facing Epic reporting platform, establishing the model for self-service analytics.

ADVISORY & INTERNATIONAL LEADERSHIP

- **Dartmouth Health Executive Cabinet, AI Advisor (2024).** Advised the CEO cabinet on AI infrastructure modernization and technology investment; delivered a multi-year strategic plan to executive leadership and the board.
- **Global Health Data@Work Consortium, International Lead (2017–2021).** Led technology governance and applied data science collaboration across EU and UAE institutions; represented members in international digital health forums.

EDUCATION

Master of Science, Bioengineering — Johns Hopkins University, Baltimore, MD

Bachelor of Science, Civil & Environmental Engineering — Wayne State University, Detroit, MI

TECHNOLOGY & REGULATORY LANDSCAPE

Platforms, Cloud & AI: SAP, Workday, PeopleSoft/Exadata, ServiceNow, Microsoft 365; Epic (Cosmos, Genomics, ambient AI); GCP, AWS, Azure, Oracle Cloud; Gemini Enterprise, predictive modeling, Python, R, SQL, Tableau, Power BI, HL7/FHIR

Governance, Risk & Compliance: HIPAA, GDPR, FedRAMP, FISMA, HITRUST, NIST AI RMF; model validation, performance thresholds, continuous monitoring, IRB-aligned research data access; business continuity/DR, Zero Trust
